

Mi-JET[™]

Parts Cleaning System

- Easy To Install - Connects to Shop Air In Minutes
- Keeps The Air & Floor Clean Of Oil Residue
- Captures Expensive Cutting Fluids For Reuse
- The Perfect Accessory For Swiss Machine Shops

How it works:

With one actuation, the MiJET[™] air gun trigger starts two processes:

- While holding the MiJET[™] air nozzle above inlet pipe, pulling the trigger drives air to blow residue off a part.
- Simultaneously, the MiJET[™] creates suction, pulling lubricant, chips, and air downward, capturing the residue.
- Exhaust air is filtered before exiting MiJET[™].

Flat Top Mi-JET

Angled Top Mi-JET

Solvent Container For Washing Parts

Wash Stations Include:
